

Abstract of disclosure

A method for solving a system of N linear equations in N unknown variables. The method comprising:

- (a) storing an estimate value for each unknown variable;
 - 5 (b) initialising each estimate value to a predetermined value;
 - (c) for each estimate value:
 - (i) determining whether a respective predetermined condition is satisfied; and
 - (ii) updating the estimate if and only if the respective
 - 10 predetermined condition is satisfied; and
- repeating step (c) until each estimate value is sufficiently close to an accurate value of the respective unknown variable.
